

## **"Virtual keyboard language" setting**

"Virtual international keyboard language", when it is configured. the scanner can directly comply with the computer device's keyboard language no matter it is Italian, Portugal, or Spanish.

This configuration is only working with Windows OS. This solved the issue when the scanner is not with the keyboard language in some countries like Portuguese.

To configure it, proceed as follows:

- **Model EW3410**

1. Scan the code Setup Barcode ON

Setup Barcode ON

2. Scan the code International Keyboard Layout

The process has finished.

- **Model EW3410 R1**

Scan the code below

The process has finished.
